

LIST OF ILLUSTRATIONS

- Fig. 1-1. The camera as a trigger of new visual technologies in the twentieth century
- Fig. 1-2. Example of visualization of sound wavelength
- Fig. 1-3. Data visualization
- Fig. 1-4. Networked and ubiquitous learning
- Fig. 1-5. Example of illustration
- Fig. 1-6. Merging data visualization and illustration
- Fig. 1-7. Example of data mapping that supports analytic clusters
- Fig. 1-8. Visual rendering of the theoretical underpinnings of an ethnography
- Fig. 1-9. Analytic example for the ethnography of medicalized assisted reproduction
- Fig. 1-10. Example of combining score, melodic contour and layered annotated visualisations
- Fig. 2-1. From the shared online fieldnote diary in the study by Apostolidou and Daskalaki (2021)
- Fig. 2-2. Visualization of the word “Victorian”
- Fig. 2-3. Visualization of the word “braid”
- Fig. 2-4. Visualization of the word “dualism”
- Fig. 2-5. Artefact’s navigation screen
- Fig. 2-6. Depiction of research participants as families
- Fig. 2-7. The Medical Space and its satellites
- Fig. 2-8. Difficult collaborations
- Fig. 4-1. The maqam Iceberg
- Fig. 4-2. Analysis of a taksim using staff notation and stemless notes
- Fig. 4-3. Transcription/analysis of Aka Gündüz taksim performance by Simms
- Fig. 4-4. Transcription/analysis of Dede Suleyman Ergüner’s Rast taksim performance by Cholevas
- Fig. 4-5. Pesrev (prelude composition) example from scores archive
- Fig. 4-6. Example of dynamic pitched note in Uşşâk taksim by Şükrü Tunar on staff notation
- Fig. 4-7. Commas division of the whole tone in Ottoman Makam music
- Fig. 4-8. Accidentals of Ottoman Makam music in commas
- Fig. 4-9. Example of Makam scale n-gram map, used as a background layer for the projection of melodic contour
- Fig. 4-10. Melodic contour extracted with Sonic Visualiser. The x axis corresponds to time in seconds and the y axis corresponds to pitch in Hz (log scale)
- Fig. 4-11. Projection and animation of the audio synced melodic contour on the n-gram map
- Fig. 4-12. Audio synced melodic contour with 2nd layer marking phrases
- Fig. 4-13. Combined staff score and melodic contour on n-gram map
- Fig. 4-14. Annotations layer on Makam flavours
- Fig. 4-15. Layer of annotations on Çarpma techniques
- Fig. 5-1. Synced score and Makam map for *H Zorî ev Tâφω*
- Fig. 5-2. Percussion (red bubbles)
- Fig. 5-3. Oud sound rendered as blue rings
- Fig. 5-4. Tarhu sound rendered as a green melodic contour
- Fig. 5-5. Violin sound rendered as a purple melodic contour
- Fig. 5-6. Ney sound rendered as a black melodic contour
- Fig. 5-7. Martyria and phthongoi of byzantine mode Ἦχος πλάγιος του Πρώτου (plagal first mode)
- Fig. 5-8. Intervals scale Makam Uşşâk
- Fig. 5-9. Scale intervals added with a bar next to note names
- Fig. 5-10. Score in use for Uri Uri Beyati Beste
- Fig. 5-11. Transcription of Kani Karaca’s version of Uri Uri
- Fig. 5-12. Uri Uri Audio-score syncing in ianalyze
- Fig. 5-13. Uri Uri Audio-score and melodic contour on Makam map synced
- Fig. 6-1. Dominant writing/thinking technologies
- Fig. 6-2. Complementary representation of ney taksim by Ulvi Erguner in staff notation and Makam n-map
- Fig. 7-1. Examples of teaching music synaesthetically
- Fig. 7-2. Representing the surrogate body as a crossing between organic matter, time, city map and document
- Fig. 7-3. Depiction of musical phases from the improvisation on the poem “All Souls’ Day”
- Fig. 7-4. Visualization of cultural versus biological relatedness in interlocutors’ testimonies
- Fig. 7-5. Vision-as-fractal
